January 17, 2006

Dear Valued Customer:

In order to meet the demands of our customers, Speedline Technologies is continually developing new products & features for our broad product line. As part of our product life cycle planning process, we are continually replacing older equipment with improved product designs. This time-phased process allows us to take advantage of the latest technology available to provide enhanced manufacturing equipment to our customers. As a product moves through this life cycle process, it becomes increasingly difficult to update products due to technology advances or changing vendor support requirements.

As a result, Speedline Technologies has decided to move the Camalot 3600 into the Archive phase of our product life cycle. Under this phase, the Camalot 3600 is no longer supported by our field service or technical support organizations. We will continue to offer spare parts for this platform until inventory is depleted.

To replace the Camalot 3600, we recently introduced the XyflexPro+. The XyflexPro+ was developed to offer increased performance and reliability. The new platform gives improved UPH, enhanced software functionality and has twice the accuracy of the superceded platform. If you are interested in learning more about our new XyflexPro+, please contact your local Speedline Technologies representative or visit us at [www.speedlinetech.com](http://www.speedlinetech.com).

Sincerely,

A handwritten signature in black ink, appearing to read 'Hugh Read'.
