Dear Valued Customer:

In order to meet the demands of our customers, Speedline Technologies is continually developing new products & features for our broad product line. As part of our product life cycle planning process, we are continually replacing older equipment with improved product designs. This time-phased process allows us to take advantage of the latest technology available to provide enhanced manufacturing equipment to our customers. As a product moves through this life cycle process, it becomes increasingly difficult to update products due to technology advances or changing vendor support requirements.

As a result, Speedline Technologies previously moved the Electrovert Infraclo series into the Archive phase of our product life cycle. Under this phase, the Infraclo series is no longer supported by our field service or technical support organizations. We will continue to offer spare parts for this platform until inventory is depleted.

To replace the Infraclo series, we offer the Electrovert Bravo 8105. The Bravo 8105 was developed with Advanced Heating Technology, high volume forced convection blowers & patented tubular rail heaters, and includes 350°C high-temperature processing capabilities. It is also ready for your lead-free processing requirements. If you are interested in learning more about this reflow system, please contact your local Speedline Technologies representative or visit us at www.speedlinetech.com.

Sincerely,

A handwritten signature in black ink, appearing to read 'Marc C. Apell'.
