Camalot SmartStream™ Receives Vision Award

FRANKLIN, MASS – April 14, 2008 – Speedline Technologies has received the 2008 Vision Award from SMT Magazine in the category Dispensing Equipment for their Camalot SmartStream dispense technology. Hugh Read, product manager for dispensers, received the honor on behalf of Speedline on April 2nd at the IPC APEX[®] trade event in Las Vegas.

SmartStream offers a cost-effective, accurate and easily-maintained alternative to jetting. The non-contact system features “streaming,” a patent-pending technology in which material is dispensed in a narrow column, rather than a single sphere. Well-suited to underfill applications, SmartStream eliminates use of a needle and incorporates positive displacement of the dispensed material with a piston and barrel combination. Piston control via closed-loop servo drive achieves high accuracy and repeatability. Unlike other methods, SmartStream does not strike the nozzle/seat with the piston, so internal wear and maintenance requirements are greatly reduced.

Mr. Read commented, “Performance, ease of maintenance and low cost of ownership were key design drivers for SmartStream. We are very pleased to be able to offer the desirable combination of both high uptime and strong capability with this new method. It is an honor to have SmartStream recognized by the industry with the Vision award.”

The 16th annual Vision Awards recognized innovation and leadership across the electronics assembly supply chain, including materials, software, and complex equipment that advances the industry. Winners and finalists were recognized for their contributions to the industry in each of 17 award categories. Products were judged specifically on their innovation, cost-effectiveness, speed/throughput improvements, quality, ease of use, maintainability/repairability, and environmental responsibility.

About Speedline Technologies

Speedline Technologies is the global leader in process knowledge, services and manufacture of capital equipment used in the printed circuit board assembly and semiconductor industries.

Based in Franklin, Massachusetts, USA, the company markets five best-in-class brands: Accel microelectronics cleaning equipment; Camalot dispensing systems; Electrovert wave soldering, reflow soldering and cleaning equipment; MPM stencil and screen printing systems; and Protect global services, support and training solutions.
